Answer to all your weight gain problems end right here

In today's hectic lifestyle that most of us are enmeshed in, paying attention to one's own fitness takes a backseat. Higher and higher creeps the weighing scale, until one day, you realise that you need to lose that weight before it's too late. Here begins the hunt for a trusted, safe and long-term method for weight loss.

Perfect Wellness now has an answer with its safe, non-invasive and painless weight loss programme using i-lipo technology. I-lipo is an intelligent alternative to liposuction for quick and effective weight loss. This highly sophisticated FDA-approved technology entails emission of low levels of laser energy to target stubborn fat cells in a concentrated area. The stored triglycerides in these cells break down into free fatty acids and glycerol and get released through channels in the cell membranes. These substances are then transported around the body to the tissues that will simply use them during metabolism to create energy. So basically with i-lipo treatment, the body is able use its own fat cells for its energy needs, and then altogether eliminate them in the post-treatment period of supervised exercise.

With the recommended treatment duration of eight sessions per desired area, measurable centimeters worth of fat can be effectively reduced. In addition, the regime of exercise and a balanced diet recommended by a trained professional gives a boost to these efforts, making it sustainable over the long term. It doesn't make unreasonable demands on the body; it just uses pure science and works in harmony with the natural resources of the body!

Compared to surgical liposuction and other ultrasound or laser techniques, the revolutionary new I Lipo technology is much more comfortable;

yet produces similar results. The process of fatty acid release is a natural response of the body when the body needs to use stored energy reserves. Thus I Lipo does not create any unnatural reaction in the body nor does it affect or damage any surrounding structures such as skin, blood vessels and peripheral nerves. It's a totally non-invasive, painless and safe treatment option. The treatment can be performed on all skin types and body areas.

Clinically proven results, cutting-edge technology and visible changes in your body all under medical supervision of trained professionals.
